

Tarik Ayvazi – Portfolio

Documentation

Figma

<https://www.figma.com/design/Kb1frPcuqGo94kQ6Gn191i/IMC-Tarik-Portfolio?node-id=1-2&t=Lv8BKPU6fq8pe6Tk-1>

I designed the theme & content structure in Figma since it is easier for me to just convert a design to code rather than doing them at the same time.

General styling and theme

Vibrant and playful colors as well as the font

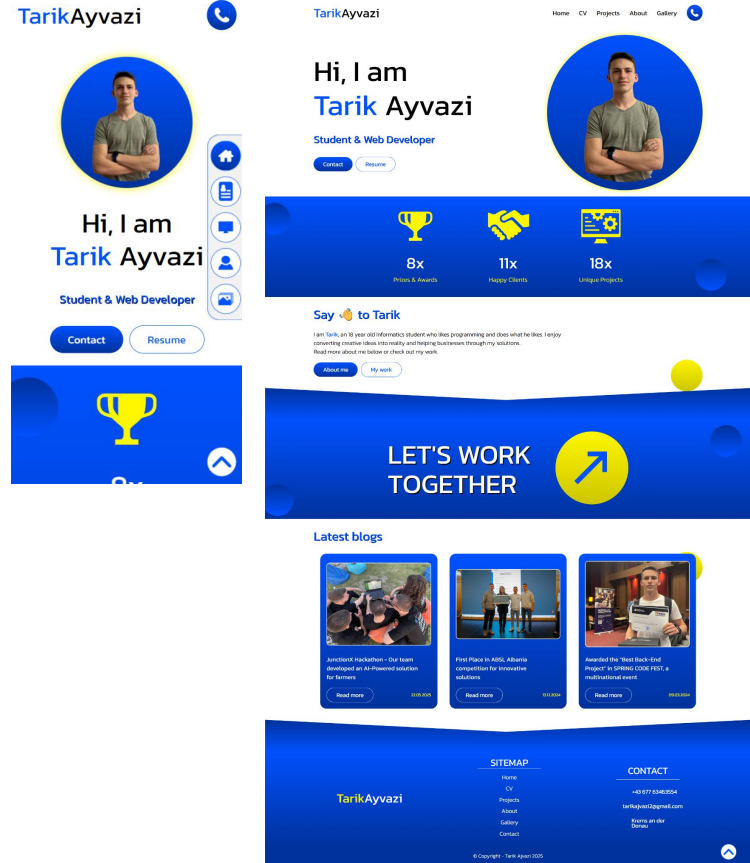

General information

- I tried using semantic elements wherever they can be used, and tried to write reusable CSS code as much as possible
- Fully (pixel-perfect) responsive, I mainly used grid for multi columns in a row and used flexbox for two sections that needed to be a column at some point (px). I also used @media for some parts so the website looks more natural
- The website has a custom scrollbar matching with the theme
- I implemented basic needed <meta> in all of my files
- I hosted it on my domain (tarikajvazi.com) with a subdomain (web.tarikajvazi.com) - this project will be a great refresh for my original 2 year old website
- All the icons are SVGs since we could not use libraries
- Every line was typed by me. NOT 1 Line was coded by ChatGPT, I am ready to fully defend my work at any point if needed

Home

- Navigation + Back to top
- Hero section + pulsing animation
- Some interesting numbers, about me and banner
- 3 Blogs - each has a clickable button and has content (semantic structure)
- Since we could not use any libraries like jQuery which I use a lot, I did the mobile navigation as a sidebar (with active class. It is on the right side since most people are right handed)

Blogs

- Blog 1, Blog 2, Blog 3
- Each have a back button, title, description and an image
- The back button destination is `index.html#blogs`

First Place in ABSL Albania competition for innovative solutions

13.12.2024

Our idea of ClassCompass, a Learning Management System, started in November 2023. We, as a team, worked on that idea for months and participated in many pitch competitions, where our biggest win was the ABSL Albania competition. It was a 2 day event-workshop where at the end of the second day we presented our ideas. The judges decided that our presentation as well as the idea was the best among the ideas there. It was a great experience for us and an opportunity to learn a lot.

JunctionX Hackathon - Our team developed an AI-Powered solution for farmers

22.09.2025

During a 3 day hackathon held in Prizren, Kosovo, me and my four teammates developed an agricultural solution powered by AI.

The main concept of the project was enabling farmers to create their own farms online and select their locations there. After that, with the help of combination of OpenAI API and WeatherAPI we tried to predict the state of the crops and when should they be watered, harvested etc. Apart from that, we included an upload picture section where anyone can take a picture of any plant and AI diagnoses it.

Projects

- Title banner with bubble like circles in the background
- Simple cards with a title, description and a link to each website. Grid layout
- I used <article> for the cards and other semantic elements throughout

About

- A short text about me and my journey + a picture of me
- At the bottom part I put some pictures of myself in competitions and three pictures representing my hobby

About

Learn about me

I am Tarik Ayvazi. From a young age I was interested in programming and creating something out of an idea.

When I was 13, I started going to a programming school learning many different languages and technologies. Soon after, I started competing and earning prizes in my field, which was mostly web development and later implementing that to business solutions.

At 16, I landed my first client and made a simple landing page. As time went on, I started getting more and more complicated projects that really helped me learn the skills. Apart from that, I also created projects of my own like a Hotel Management System, which I successfully managed to get two clients in another country at the age of 17. At that time I also started working on creating a Digital Catalog Generator for a distribution company to make their work process a lot easier, and I still manage it to date. My last project of this kind was a Digital Wedding Album, an interactive platform for guests in a wedding.

Of course, I do not only do web development in my life, I also like math and I was third nationally last year, got one first place and two third places in my city. And outside of academics I enjoy martial arts.

Gallery

- Some of the views I liked the most when I scrolled through my camera roll
- Used `<figure>` + `img` and `figcaption` to create pictures and have a text that represents the location and redirects you to Google Maps in another tab
- Used grid for automatic layout

Contact

- Contact information + contact form
- The action of the form redirects to my original website, exactly to the contact div
- Different styling on hover and focus

The screenshot displays the 'Contact' page of the TarikAyvazi website. The page has a dark blue header with the site name 'TarikAyvazi' and navigation links: Home, CV, Projects, About, Gallery, and a phone icon. The main content area is titled 'Contact' and features a section 'Let's get in touch'. This section contains 'Contact information' (phone, email, location) and a contact form with fields for Name, Email, Subject, and Message, along with a 'Send' button. The footer includes a 'SITEMAP' (Home, CV, Projects, About, Gallery, Contact), 'CONTACT' information (phone, email, location), and a copyright notice '© Copyright - Tarik Ayvazi 2025'.
